Auxiliary Systems

Tell us once whether a building has a central station. New in Release 2026.09.4, September 2026.

The office already knows whether a building is monitored. Now it says so once, and your technician is asked about the monitoring station only where there is one.

Where the switch is

Open the property, click **Edit**, and find **Auxiliary Systems** under **Inspection types**, where you already set its frequency, fee and technician. The **Monitored by a central station** tick box sits right underneath.

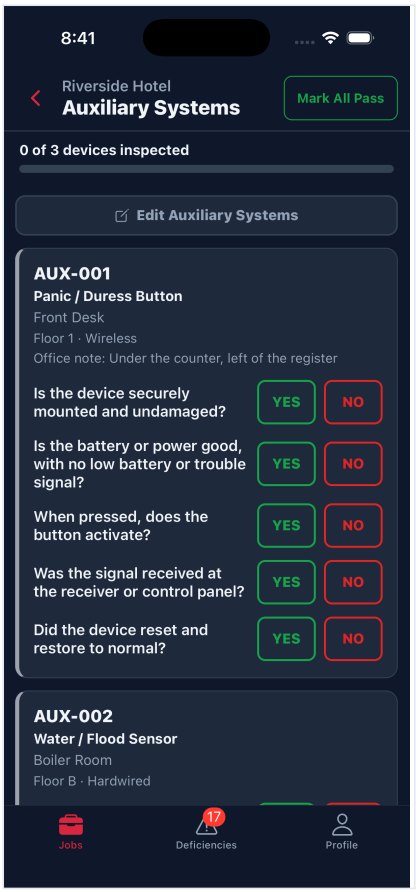

The property's Auxiliary Systems block. Tick the box if these devices report off site.

> **Every property starts ticked.** Clear the box on a building that has no central station.

What your technician sees

- **Ticked:** six checks per device, and the monitoring question is answered Yes or No.
- **Clear:** five checks. The monitoring question is not asked at all, on the phone or on the report.

A panic button at a property with no central station: five checks.

Also in this release

- **Import Devices reads more of what your panel software writes.** It now also opens tab and semicolon separated files, and tables saved out of a "Save as Excel" button.
- **The Quick Start guide now covers Auxiliary Systems**, with screenshots.
